LMC Jackets™

For Transfer & Impression Cylinder

The Quality Alternative to OEM Jackets

These steel jackets are topped with a Liquidised Metal Ceramic (LMC™) coating for optimum ink repellency and durability.

A complete range of steel substrate thicknesses are available to meet the requirements and specifications of almost every perfecting press make and model. Jacket fixtures and fittings also vary for perfect fit onto the cylinder.

LMC Jackets are guaranteed for +36 million impressions or 18 months, showcasing their outstanding durability. This is supported by a high resistance to solvents and heat.

LMC jackets are also easily cleaned manually or automatically with commercially available washing agents.

4,000+ LMC Jackets successfully installed worldwide since 2012

L40SP & LS40SP Impression Jackets

L40P & LS40P Impression Jackets

“

LMC Jackets have performed very well on our Komori presses. They're just as good, if not better, than OEM jackets - and we've saved money.

Gary Lees, Operations Manager (Print Room), Wyndeham Grange

Jackets Installed on Komori SP40 (8 Col) & Komori SP540 (10 Col)

Transfer Cylinder

When the coated transfer cylinders on KBA Rapida presses start showing signs of wear, it poses a costly issue for the printer.

Our innovative solution involves a custom LMC Jacket that can be attached to a reconditioned cylinder. With this approach, the printer is only charged for the jacket, not the entire cylinder.

Please note that this item is exclusively offered through an exchange basis, and you are required to return the previous set of transfer cylinders for refurbishment.

“ The impression guarantee fitted our criteria and we've saved in the region of 45%. I would order LMC Jackets again without hesitation.

Darren Want, Assistant Production Manager, Warners Midlands PLC
