SUPER ICP™

the original anti-marking film

The original glass bead anti-marking products were developed in Japan by Shinoda. They coined the term ICP which is now common place in referring to anti-marking films. Since their invention, Shinoda have developed two glass beaded films, the standard ICP (white) and premium Super ICP (green).

Super ICP film is available in a full range of converted jackets for Heidelberg, complete with fixtures and fittings for perfect fit onto the cylinder. Its optimal glass bead surface is sealed with a premium silicon coating, which is super repellent to ink, oil and water.

The standard white ICP film is not sealed in the same way but is topped with a durable uniform glass bead matrix to prevent ink from marking the substrate.

Both films are easily cleaned manually with water miscible cleaning agents.

Shinoda ICP products have served the global printing industry since the 1960s
